Excerpt: . proportional to the product of the mass, and inversely proportional to the square of the distance between them, which is the statement of Newton's law, and which also expresses the law of magnetic or electrical attraction--then would those bodies known as comets surely fall into the sun upon their startlingly near approaches to the latter, in describing the perihelion of their orbits. Their mass is almost infinitely lighter than that of the sun, and if Newton's law of mass and distance governing the pull of gravitation were true, no amount of accelerated motion due to momentum could prevent this result--a fact startlingly apparent when they pass perihelion and recede from the enormous attraction of the sun--an attraction which, at the comparatively immense distance of the earth, represents a force acting upon this planet which would snap in twain a steel rod..
