

Sugar, cane and beet

By George Martineau

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 40 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1918 Excerpt: . . . way about 100, 000 tons of sugar a year, which is credited to Germany as part of her yield of sugar from the roots. In beetroot sugar there is no glucose, but in the molasses there is some invert sugar, the product of injury to the syrup during the manufacture. The reason why there is molasses is the presence of salts. The theory is that these salts prevent a certain quantity of sugar from crystallizing, and that is the sugar which is held in suspension by the salts in the final syrup, called exhausted molasses. It was much discussed, some fifty years ago, what this melassigenic power, as the French called it, amounted to. The theoretical figure was that one per cent. of ash prevented 35 per cent. of sugar from crystallizing. But practically the figure 5 has been adopted as the coefficient. A raw beetroot...
