In the appendix to his Universal Arithmetic, Newton approves of it highly for the construction of the roots of equations of the third and fourth order. For these purposes he prefers it to the means which the lines of the second order present. The intercept of the superior conchoid between the vertex and the point of inflection is sometimes used in architecture as the figure of the shaft of the Corinthian column. The etymology of the name conchoid is from the Greek word $\kappa\omicron\sigma\eta$ a shell. Art. 412. Diocles, a Greek geometer, who lived in the fifth century after Christ, was the inventor of this curve. The occasion of its invention was the solution of the...
