When rectangular coordinates are used, the expression for the area generated by a line parallel to the axis of y and terminated by two curves is Let AB , in Fig. 13, be the initial, $o A c$ and CD the final position of the gen-FIG-J3 erating line, then the area is $ABDC$, which is enclosed by the curves $yyu yy$ and by the straight lines If in equation (1) we substitute for $y2--yt$ the equivalent expression dy , we have. $Ul f I-2 4 dx$, (2) $J a iy$, which expresses the area in the form of a double integral. In this double integral the limits yt and yi for y , are functions of x , while and b , the limits for x , are constants. 122. If the area is that of...
